

For Astigmatism and Presbyopia

Dear <Patient Name>

Transform your vision with Duette Progressive hybrid contact lenses

I am writing to advise you that we have recently started working with this award-winning contact lens in order to better correct the vision of patients like yourself.

As you know you have a combination of astigmatism and presbyopia. Astigmatism is an irregular curvature of the cornea at the front of the eye that is very common and often described the eye being more rugby ball than football shaped. Presbyopia is the proper name for when we start to need reading glasses and as I'm sure you're aware, getting contact lenses to correct this combination can be difficult.

Have your cake and eat it!

As the enclosed leaflet explains in more detail, Duette hybrid contact lenses use a 'best of both worlds' approach, in that they provide the excellent vision of a rigid lens with the exceptional comfort of a soft lens. Additionally, Duette Progressive lenses are specifically designed to help you see clearly at all distances.

Key benefits of Duette Progressive:

- Tear-lens optics neutralise astigmatism for great vision
- Seamless vision from distance to near and back again
- Unique lens material ensures optimal eye health
- Looks, feels and fits on the eye like a soft lens

If you would like to discuss being fitted with Duette Progressive contact lenses, then simply give the practice a call and we will be happy to answer any questions you may have.

Duette Progressive are made-to-order and so we will need to book you in for a full suitability assessment. At the same time, we will take some measurements to enable us to order your personalised lenses.

I/We truly believe that these lenses could be the answer to your contact lens needs and so I look forward to seeing you soon.

Yours sincerely
